## PROFESSIONAL SUMMARY

Visionary award-winning inventor registered with the Sri Lanka Inventors Commission (SLIC), with a proven track record of developing sustainable, commercially viable, and nationally recognised technological solutions. Specialises in smart infrastructure, eco-friendly building materials, wireless energy systems, and automated safety technology. Holds two national patents with a pending application under the International Patent Cooperation Treaty (PCT) framework. Recognised by government bodies and state universities for pioneering innovations in public safety and environmental sustainability. Brings exceptional capacity for independent R&D, prototype development, and full-cycle commercialisation.

## PATENTS & INTELLECTUAL PROPERTY

LK/P/1/23235

National Patent Registration — Eco-friendly thermal-insulation building material solution, selected for further development with a Sri Lankan state university.

LK/P/1/23387

National Patent Registration — Advanced functional system currently submitted under the International Patent Cooperation Treaty (PCT) to secure global intellectual property rights.

## KEY INVENTIONS & PROJECTS

### 01. National Road Safety Vehicle Number Plate System

- Designed and developed a high-security smart vehicle number plate system in direct collaboration with the National Council for Road Safety, Sri Lanka.
- Selected by the government council for commercialisation, technical onboarding, and nationwide pilot project implementation.
- Currently operational as a fully-funded government pilot project across Sri Lanka.

### 02. Wireless Electric Vehicle (EV) Charging System

- Engineered an induction-based wireless charging network for electric vehicles — eliminating cable dependency entirely.
- Successfully advanced to the experimental and testing phase, with active power-transfer optimisation underway.

### 03. Eco-Friendly Thermal-Insulation Ceramic Blocks

- Formulated a sustainable recycling process converting waste ceramic tiles and porcelain into heavy-duty heat-insulating construction blocks.
- Actively mitigates indoor temperature rises, offering an energy-saving solution for modern green-building architecture.
- Patent filed and selected for co-development with a national state university.

### 04. Automated Flash-Flood Early Warning System

- Designed, coded, and deployed a localised emergency flash-flood detection system providing real-time community safety alerts.

- Functional units successfully installed in high-risk flood zones across Sri Lanka.

## HONOURS & AWARDS

---

### Gold Medal — 1st Place

#### Sahasak Nimavum National/Provincial Innovation Exhibition (2023)

Awarded first place for pioneering engineering excellence in a highly competitive national innovation pool.

### Gold & Bronze Medals — Dual Podium Finish

#### Sahasak Nimavum National Exhibition (2023)

Secured 1st and 3rd place simultaneously for two distinct technological inventions submitted in the same competition.

### National University Collaboration Shortlist

#### Sahasak Nimavum National Exhibition (2024)

Selected from hundreds of national innovations to form an exclusive R&D partnership with a premier Sri Lankan state university for advanced commercial development.

### National Commercialisation Laureate

#### National Council for Road Safety Competition (2024)

Received official state-sponsored technical backing, infrastructure implementation support, and nationwide pilot framework initiation.

## CORE COMPETENCIES & EXPERTISE

---

- ▶ **Research & Development:** Prototyping, Technical Architecture, Systems Engineering
- ▶ **Green Technology:** Waste Recycling, Eco-Friendly Building Materials, Sustainable Infrastructure
- ▶ **Smart Systems:** Wireless Power Transfer, Early Warning Systems, Automated Safety Devices
- ▶ **Intellectual Property:** Patent Drafting, IP Commercialisation, Technology Transfer
- ▶ **Public-Private Collaboration:** National Stakeholder Engagement, Pilot Project Execution
- ▶ **Independent R&D:** Concept to Prototype, Circuit Assembly, National Laboratory Testing

## PROFESSIONAL EXPERIENCE

---

### Lead Inventor / Independent R&D Specialist | 2021 – Present

Self-Employed · Sri Lanka

- Operate an independent research and development cell focused on intellectual property creation and sustainable technology systems.
- Manage end-to-end product lifecycles — from mathematical conceptualisation and raw material sourcing to prototype assembly and national laboratory testing.
- Negotiate tech-transfer agreements and pilot implementations with national ministries, statutory boards, and state university research departments.
- Current patent portfolio assets valued at LKR 20 Million (~EUR 60,000+) at projected baseline commercialisation.

## EDUCATION & PROFESSIONAL AFFILIATIONS

---

### Registered Inventor

Sri Lanka Inventors Commission (SLIC) — Official state recognition and credentialling as a recognised innovator within Sri Lanka.

### G.C.E. Ordinary Level Examination

Passed with High Distinctions

## PERSONAL DETAILS

---

**Full Name:** G.H.D. Oshada Neranga

**Nationality:** Sri Lankan

### CONTRIBUTION TO EUROPE

Oshada Neranga brings a high-value, internationally protected invention portfolio aligned with Europe's core priorities.

-  **Green Innovation** — Eco-ceramic thermal-insulation technology supports Europe's circular economy and net-zero building targets.
-  **Clean Energy** — Wireless EV charging R&D directly advances Europe's electric mobility and sustainable transport agenda.
-  **Public Safety** — Flood early warning systems and smart safety infrastructure address climate resilience priorities across Europe.
-  **R&D Capacity** — Active PCT patent application positions Oshada to contribute to European innovation ecosystems and technology transfer networks.
