To Whom It May Concern,

Commendation Letter

It is with great pleasure and confidence that I write this letter in strong support of Mr. G.H.D. Oshada Neranga and his application for a Skilled Visa to Australia.

I have had the privilege of closely observing and mentoring Mr. Neranga through my role as Director of the Southern Technology Incubation Centre (STIC), Sri Lanka, where I have witnessed his exceptional creativity, dedication, and outstanding ability to transform innovative ideas into practical technologies with significant social and industrial value.

Mr. Neranga possesses a rare and extraordinary inventive mind. Since his school years at Udugama National College, Galle, Sri Lanka, he has consistently demonstrated exceptional talent in innovation and technology development. His passion for invention, combined with his perseverance and technical capability, has enabled him to develop numerous innovative technologies addressing practical challenges in industry, environmental sustainability, disaster management, and public safety.

Among his most notable innovations are:

- Development of a high-strength, eco-friendly construction brick manufactured from waste porcelain using high-pressure cold bonding technology with a ball clay catalyst. This innovative technology converts waste porcelain into valuable construction materials and has already found practical application within the brick manufacturing industry in Sri Lanka.
- Strong porcelain brick technology utilizing recycled porcelain waste for sustainable construction.
- A wide-angle rotating camera system designed for enhanced surveillance and monitoring applications.
- An innovative grass removal device specifically designed for removing weeds growing between interlocking pavement blocks.
- An emergency water storage tap intended for emergency and disaster preparedness.
- A pre-warning flood detection and alert system to improve community preparedness during flood events.
- Several additional innovative technologies addressing practical engineering and environmental challenges.

Many of these inventions have received prestigious Gold, Silver, and Bronze Awards at provincial and national invention competitions in Sri Lanka, reflecting their originality, technical excellence, and societal impact. Furthermore, several of his projects were selected for commercialization funding through the Southern Technology Incubation Centre, where they progressed toward industrial implementation with outstanding recognition. A number of his innovations have also entered the process of obtaining both national and international patent protection, demonstrating their novelty and commercial potential.

Throughout my association with Mr. Neranga, I have found him to be an exceptionally committed, hardworking, and ethical innovator. He consistently demonstrates outstanding problem-solving ability, creativity, and determination to develop technologies that benefit society while promoting environmental sustainability. His work reflects not only technical competence but also a strong sense of social responsibility and entrepreneurial vision.

Mr. Neranga has earned recognition within Sri Lanka's innovation community and has become a respected figure in national discussions on invention and technology development. His contributions have significantly enhanced the reputation of the Southern Province as a centre for innovation. In my professional opinion, individuals with his level of originality, commitment, and inventive capability are exceptionally rare. He is undoubtedly one of the most promising innovators I have encountered during my academic and professional career.

I have no hesitation in stating that Mr. G.H.D. Oshada Neranga would be a valuable asset to Australia. His innovative thinking, technical expertise, entrepreneurial mindset, and commitment to developing sustainable technologies will enable him to make meaningful contributions to research, industry, economic development, and technological advancement. I strongly believe that he possesses the skills, character, and vision expected of highly skilled professionals and innovators.

Therefore, I offer my highest recommendation and wholehearted support for his Skilled Visa application. I am confident that he will continue to distinguish himself through his exceptional contributions and will become an asset to any organization, research institution, or innovation ecosystem in which he is involved.

Should further information be required regarding Mr. Neranga's achievements or my assessment of his capabilities, I would be pleased to provide additional details.

Yours faithfully,

Prof. KKL B Adikaram

Director - Southern Technology Incubation Centre,
University of Ruhuna.
